REASONS FOR ALLOWANCE

1. Claims 1-54, 58-75 and 84-100 are canceled claims.
2. The following is an examiner's statement of reasons for allowance: As previously indicated, in Naik'168, the oxide layer forms *while using* the exposed portions of the photo-definable layer as a patterned etch mask, not after completion of the use of the exposed portions of the photo-definable layer as a patterned etch mask as presently required in claims 55 and 76. In Chun et al (GB 2 294 124 A), a silicon monomer layer is coated on a photoresist layer, which is coated on a substrate. Exposing the silicon monomer layer to light through a mask selectively polymerizes the silicon monomer. The unexposed area of the monomer layer is then removed, and the remaining polymerized regions (i.e., the exposed area) are subjected to oxygen plasma to form silicon oxide layer. Then, the oxide layer is used as a mask to expose and develop the photoresist layer. Therefore, in Chun, the oxide layer is formed first, and then the oxide layer is used as a patterned etch mask. Thus, Chun is distinguishable from present invention, which requires that the oxide layer be formed after completion of the use of the exposed portions of the photo-definable layer as a patterned etch mask.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
